Introduction to UI Frameworks

- Boilerplate Prevention: Eliminates writing repetitive reset styles, core typography, and complex grid mathematics.
- Aesthetic Consistency: Guarantees uniform padding, unified borders, and highly balanced type scales automatically.
- Rapid Prototyping: Enables lightning-fast interface assembly directly from predefined classes or components.

```
<div style="padding: 16px; background-color: #4f46e5; border-radius: 8px; color: white;">
  Building block
</div>
```

```
<!-- Modern Framework Equivalent -->
<div class="p-3 bg-primary rounded text-white">
  Building block
</div>
```

Bootstrap: Typography, Colors & Spacing

- Semantic Palette: Colors are assigned semantic roles (e.g., text-success, bg-danger) for immediate UI context.
- Standardized Spacing: Spacing uses a 0.25rem grid scale: m-1 (4px) through to m-5 (48px).
- Sizing Helpers: Modifies font size smoothly without changing tags using responsive size helper classes like fs-1.

```
<div class="p-4 mb-3 bg-light text-dark border rounded">
  <h3 class="text-primary fs-2 font-bold">BIT Core Lecture</h3>
  <p class="lead text-secondary m-0">
    This box has standard padding (p-4).
  </p>
  <button class="btn btn-success mt-3">Confirm</button>
</div>|
```

Bootstrap Components

- Pre-Assembled Design: Includes drop-in items like .card, .navbar, and .modal directly.
- Embedded Behavior: Built with robust accessibility criteria and native support for modern screen readers.
- Interactive Mechanics: Uses lightweight, bundled JS plugins for dynamic state management (e.g. showing dropdown menus).

```
<div class="card shadow" style="width: 18rem;">
  <div class="card-body">
    <h5 class="card-title">Bootstrap Card</h5>
    <p class="card-text text-muted">Quick UI Block</p>
    <a href="#" class="btn btn-primary">View Details</a>
  </div>
</div>
```

Tailwind CSS: Colors, Spacing & Type

- Utility-First Design: Styles are applied via tiny, single-purpose classes rather than high-level component wrappers.
- Numeric Color Spectrum: Colors use numeric shades (50 to 950) representing clear visual weights (e.g. bg-slate-900).
- Proportional Sizing: Uses dynamic proportional spacing rules (e.g., w-4 translates directly to 1rem/16px).

```

<!-- Building styling blocks from raw utility strings -->
<div class="bg-sky-50 text-sky-900 p-6 rounded-xl border border-sky-200">
  <h2 class="text-2xl font-extrabold tracking-tight">
    BIT Tailwind Tutorial
  </h2>
  <p class="mt-2 text-base leading-relaxed text-sky-700">
    No custom CSS rules written in stylesheet.
  </p>
</div>

```

Tailwind Responsive Principles

- **Mobile-First Roots:** Core class statements without a prefix define standard values for small viewport layouts.
- **Viewport Breakpoints:** Control interface structure at specific device scales using media prefixes (e.g. md:, lg:).
- **Sizing Freedom:** Breakpoints are cleanly mapped to standardized width values configured directly inside CSS parameters.

```
<!-- Responsive configuration setup -->
<div class="w-full md:w-1/2 lg:w-1/3 bg-white p-6">
  <h3 class="text-sm md:text-lg lg:text-xl font-bold">
    Dynamic Heading
  </h3>
  <p class="text-slate-600 block md:hidden">
    Only visible on mobile screens.
  </p>
</div>
```

Tailwind Transitions & Animations

- **Dynamic Interpolation:** Control element styling changes smoothly using transition-all utility classes.
- **Motion Timings:** Specify transition lengths using standardized parameters (e.g. duration-300, ease-in-out).
- **Pre-Built Keyframes:** Trigger production-ready animation sequences directly in markup (e.g. animate-pulse).

```

<button class="bg-blue-600 hover:bg-indigo-700 transition-colors duration-300 ease-in-out text-white
px-6 py-3 rounded-xl">
  Submit Assignment
</button>

<!-- Pre-build animation class -->
<div class="animate-bounce bg-teal-500 rounded-full h-8 w-8"></div>
```
